Zomato Portfolio Project

About Us **Zomato** Delivery

Zomato is an online food delivery platform offering a loyalty program called Zomato Gold with exclusive discounts. This SQL project analyzes customer behavior, purchase patterns, and Zomato Gold's effectiveness using a fictional dataset.

Dataset Description

The project utilizes the following tables:

1. **goldusers_signup**: Contains data about users who have signed up for the Zomato Gold membership, along with their signup dates.
2. **users**: Contains data about all users on the platform, including their signup dates.
3. **sales**: Contains data about sales transactions, including the user who made the purchase, the date of purchase, and the product purchased.
4. **product**: Contains data about the products available on Zomato, including product IDs, product names, and prices.

Customer Wise Spent

userid	amount_spent
1	5230
2	2510
3	4570

First **Product** Purchased by each **Customer**

userid	created_date	product_name
1	11-03-2016	p1
2	24-09-2017	p1
3	10-11-2016	p1

P1 Product is purchased first
and through this we analyse
that **P1** is the most prominent sku

Most Purchased Item and Count

userid	product_id	count
1	2	3
2	2	1
3	2	3

From table we know that **userid:1,3**
our gold memebers and there might
be they would be getting extra benefit from
product id 2

First **Product** Purchased after being **member**

userid	product_id
1	3
3	2

A **targeted promotion** likely encouraged users to buy that product before signing up for **Zomato Gold**.

Total Orders and Amount Spent before membership

userid	total_orders	amount_spent
1	5	4030
3	3	2720

userid :1 A regular customer since order count and amount spent is much higher So order and amount can be a metric to calculate the no of customer turning in gold member

The Zomato logo, consisting of the word "zomato" in white lowercase letters on a red rectangular background. The background of the slide is white with numerous gold coins of various sizes scattered across it. A red triangle is visible in the bottom right corner.

zomato

About **Zomato**

Points

Zomato's point system rewards customers based on their purchases. Points are earned differently for each product:

- p1: 1 point for every ₹5 spent.
- p2: 5 points for every ₹10 spent.
- p3: 1 point for every ₹5 spent.

This system incentivizes spending by offering varying points for different products.

Total Points Earned and Cashback

userid	total_points	total_cashback
1	1829	4572.5
2	763	1907.5
3	1697	4242.5

Most Points given for a Product

product_id	total_points
2	1829

P2 Product yields most number of Zomato points

No of **Points** Earned **in** 1yr **of** Membership

userid	total_points
1	165
3	435

User3 has earned far more points than that off user1 and to retain gold memeber , **User1** must be provided with **custom offers**.

NOTE : Earn 5 zomato points for every 10rs spent

Key Insights from Analysis

- Since P1 is most first purchase by any customer, so it's the main sku and should always be in stock to gain more customers.
- **User:2** must be given special offer and deals to convert it him in GOLD MEMBER of Zomato
- target Marketing must be approached for more better results ahead in Zomato
